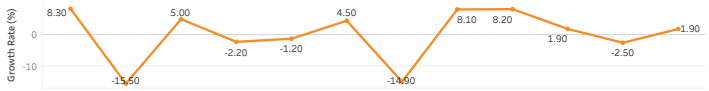
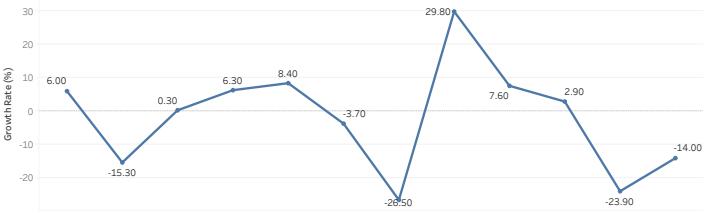
Agricultural Sector Growth (2014-2025)

Manufacturing Sector Growth (2014-2025)



Mining Sector Growth (2014-2025)



ECONOMIC INTERPRETATION

Botswana's sectoral economic performance has been uneven between 2014 and 2025. Mining experienced substantial contractions, particularly in 2020 and 2024, while also recording a strong recovery in 2021. Agriculture and manufacturing also experienced periods of positive and negative growth. The water and electricity sector showed considerable fluctuations, including exceptionally strong growth in 2022. These differences highlight the varying contributions and vulnerabilities of individual sectors within Botswana's economy.
